FIREPRO®
INTUMESCENT PIPE WRAPS CE
Fire stop solution for plastic pipe penetrations
Description
Intumescent Pipe Wraps CE are designed to seal service penetrations in apertures containing combustible plastic pipes. Pipe Wraps CE comprise layers of a graphite based intumescent sheet encapsulated in a polyethylene sheath. All Pipe Wraps CE are supplied in correct lengths to suit the pipe diameter.

Intumescent Pipe Wraps CE are tested to plastic services penetrating flexible and rigid wall constructions, rigid floors and in Ablative Coated Batt seals. Pipe Wraps CE are tested with end capping configurations that cover U/C pipes.

Applications
• Fire stopping plastic pipe penetrations in rigid/flexible walls and rigid floors
• Can be applied to PVC, UPVC, Polypropylene, PE & HDPE pipe materials

Advantages
• Simple to install with no mechanical fixings required
• Available to suit pipe diameters up to 250mm O.D.
• Up to EI120 fire resistance
• Tested in conjunction with Ablative Coated Batt seals
• Maintenance free
• Dry system
• Water resistant
Performance

Fire performance
ROCKWOOL Intumescent Pipe Wraps CE can provide up to 2 hours fire protection to plastic pipework where it passes through fire rated walls and floors.

Figure 3
Pipe Wrap CE in Ablative Coated Batt Wall seal

All pipes tested according to EN 1366-3 have been tested with a specific pipe end configuration. All pipes have been tested U/C and are suitable for C/C pipe end configurations.

The EN test standard EN 1366-3 states, “it is important to ensure that sealing systems have been tested with appropriate pipe end conditions.”

The specification of pipe closure devices will be determined based on the scope of test data and whether the pipework is ventilated or not.
Installation

The product is intended to be wrapped around the outside diameter of the pipework and is secured by means of a self-adhesive strip.

Apertures or core holes in the separating element shall be maximum oversize with respect to the pipe diameter as follows:
- 32mm - 50mm OD = 4mm
- 160mm OD = 10mm
- 200mm OD = 12mm
- 250mm OD = 14mm

The Intumescent Pipe Wrap CE is then positioned each side within the compartment wall or floor so that the edge of the product is left exposed at the face of the wall or soffit. The remaining annular space/gap shall be infilled using Firepro Acoustic Intumescent Sealant or for larger void sizes, the Intumescent Pipe Wrap CE can be sealed into the structure with ROCKWOOL Firestop Compound (see Figures 4 & 5 below).

Under fire conditions, the intumescent material expands against the structure and fills the void left by the burnt out plastic.

Where pipes are insulated, please refer to the Insulated Fire Sleeve data sheet.

Intumescent Pipe Wraps CE are used to prevent fire penetration in plastic pipes that pass through fire rated walls and floors for a specified period of up to 2 hours. They are manufactured as a sealed unit to the correct length and width to suit the pipe diameter and fire rating.

Walls should be a minimum of 100mm thickness and floors a minimum 150mm thickness. All walls should have the same or improved period of fire resistance as that required of the sealing system.

Services should be supported no further than 400mm from the surface of the separating element for walls and 400mm above the surface of the floor.

Installation instructions

1. Check that the pipe surface is clean and clear of debris, dust or loose particles.
2. Aperture temperature should be 5ºC or greater at time of installation.
3. Ensure that the appropriate Pipe Wrap CE is installed to suit the outside pipe diameter and required fire rating.
4. An annular space will be required around the service to allow sufficient installation depth.
5. Wrap around pipe and fix with integral self-adhesive strip. Ensure that when installing the Pipe Wrap CE to the pipework, that it is installed 5mm proud of the substrate’s surface.
6. For larger voids, the Pipe Wrap CE can be sealed into the structure with ROCKWOOL Firestop Compound.
7. Slide into position ensuring that both edges are exposed either side of walls and floors.
8. Annular gaps or spaces present after installation of the Pipe Wrap CE can be infilled using FIREPRO® Acoustic Intumescent Sealant.

Technical information

Standards and Approvals

FIREPRO® Intumescent Pipe Wraps CE have been tested to BS EN 1366-3:2009.

FIREPRO® Intumescent Pipe Wraps CE are third party accredited through Certifire.

Sustainability
As an environmentally conscious company, ROCKWOOL promotes the sustainable production and use of insulation and is committed to a continuous process of environmental improvement.

All ROCKWOOL products provide outstanding thermal protection as well as four added benefits:

Health & Safety
The safety of ROCKWOOL stone wool is confirmed by current UK and Republic of Ireland health & safety regulations and EU directive 97/68/EC. ROCKWOOL fibres are not classified as a possible human carcinogen.

A Material Safety Data Sheet is available and can be downloaded from www.rockwool.co.uk to assist in the preparation of risk assessments, as required by the Control of Substances Hazardous to Health Regulations (COSHH).

Environment
Made from a renewable and plentiful naturally occurring resource, ROCKWOOL insulation saves fuel costs and energy in use and relies on trapped air for its thermal properties.

ROCKWOOL insulation does not contain (and has never contained) gases that have ozone depletion potential (ODP) or global warming potential (GWP).

ROCKWOOL is approximately 97% recyclable. For waste ROCKWOOL material that may be generated during installation or at end of life, we are happy to discuss the individual requirements of contractors and users considering returning these materials to our factory for recycling.

Disclaimers
This product should only be utilised for applications as outlined in the relevant ROCKWOOL product datasheet and in accordance with the relevant ROCKWOOL Fire Resistance Testing. Additionally the product must be installed in accordance with the current ROCKWOOL guidelines. For further information please visit www.rockwool.co.uk or contact our Technical Solutions Team on 01656 868490.

Specification clauses
ROCKWOOL Intumescent Pipe Wraps CE are associated with the following NBS clauses:

- P12 Fire stopping systems
- 375 Pipe Collar – Insulated Wrap

Supporting information
For further information relating to any aspect of the FIREPRO® range, please refer to the applicable ROCKWOOL standard details at www.rockwool.co.uk or contact the ROCKWOOL technical solution team on 01656 868490, or write to: technical.solutions@rockwool.co.uk
The ROCKWOOL Trademark

ROCKWOOL® - our trademark

The ROCKWOOL trademark was initially registered in Denmark as a logo mark back in 1936. In 1937, it was accompanied with a word mark registration; a registration which is now extended to more than 60 countries around the world.

The ROCKWOOL trademark is one of the largest assets in the ROCKWOOL Group, and thus well protected and defended by us throughout the world.

If you require permission to use the ROCKWOOL logo for your business, advertising or promotion. You must apply for a Trade Mark Usage Agreement. To apply, write to: marketcom@rockwool.com
