EIFS with ROCKWOOL™ Stone Wool Insulation

Exterior Insulation and Finish Systems (EIFS) with ROCKWOOL stone wool insulation provide added performance to traditional systems that use rigid foam. Superior fire resilience, reliable long-term energy efficiency, moisture control and acoustic comfort are only part of the value a fully engineered facade system with stone wool offers. Always follow the specification and installation instructions from the EIF system holder when designing and constructing code approved assemblies.

**Fire**
Noncombustible, Class A (ASTM E84) insulation permitting use of EIFS in non-loadbearing fire-resistance-rated construction and any construction type (IBC Types I through V), without height or setback limitations.

**Moisture**
Contributes toward EIFS that allow for a high degree of drying potential and meets industry standards for drainage efficiency (ASTM E2273).

**Durability**
Provides a stable substrate without causing undesirable stress on the EIFS lamina and impact resistance that meets or exceeds industry standards (ASTM E2486).

**Acoustics**
Improved acoustic dampening for a quieter environment, particularly valuable for construction in urban environments, tested in accordance with ASTM E1332.

**Thermal Performance**
ROCKWOOL Frontrock™ provides a stable R4 per inch and maintains its thermal performance over the lifetime of the building, with system designs available up to R16 c.i.

**By Nature**
Manufactured from one of the world’s most abundant raw materials without the use of blowing agents or toxic flame retardants, EIFS with stone wool contributes towards LEED credits for your project.

For a complete list of tested and code compliant EIFS with ROCKWOOL stone wool insulation, visit [rockwool.com/EIFS](http://rockwool.com/EIFS).
ROCKWOOL® Frontrock™

ROCKWOOL® Frontrock stone wool EIFS boards are engineered to help reduce base coat consumption, provide rigid surface resistance against accidental impact, and adapt to irregularities of the wall in mechanically-fastened EIFS.

- Manufactured with tight dimensional tolerances, Frontrock has been engineered based on 25+ years of ROCKWOOL EIFS experience globally.
- Incorporates a supplementary level of quality control during the manufacturing process to maximize board consistency and quality.
- Easy to handle, cut, and install for field and panelized applications.
- Frontrock has a Red List Approved Declare label, and an HPD, supporting green building practices.
- Designed for use with EIFS for new construction and retrofit projects including as an overcladding solution.

SKU Profile

ROCKWOOL® Frontrock is available in two versions. The monolithic density offers consistent compressive strength throughout the board, and is always used below 2.5” thicknesses. The dual density design is unique to ROCKWOOL and helps to reduce board weight for improved job site handleability during installation.
